Experience the Heritage

Experience the heritage

Atlantis is a flexible and reliable system for collection management and portal construction. If you wish to manage your heritage resources in a professional and responsible way and wish to offer your customers and users an optimal heritage experience, Atlantis is the perfect choice.

Framework

Atlantis offers a framework that can be extended in many ways, in doing so, providing in the needs of Archives, Museums, Libraries and Archeologists. The framework can be extended with modules, services and portal features via plug-ins. This makes Atlantis an open, modular and extendable solution that guarantees continuity.

Modules

A wide range of collections, varying from archive and image collections to hand-written and printed sources, art and literature, construction files, deeds and registers can be managed and made available with Atlantis.

Portal Software

For environments in which various systems are used or in which there is collaboration with third party systems, Atlantis is full-fledged portal software, with which these environments can be melded together into one integrated whole.

Services

Useful and popular services can be added to improve possibilities and perception. Accessibility to search engines such as Google, links to social media, archive and file forming by the visitor, ordering reproductions, requesting copies for review, electronic payments and direct downloads. A full package of services to be of service to your users and customers to an optimal extent.

Atlantis

The ultimate platform for collection management and portal construction

Searching, presenting and sorting

The possibilities for searching, presenting and sorting are as one can expect from a modern information system: extensive and versatile. And Atlantis adds yet another dimension to that: configurable.

The search features are more than complete. Relation (is equal to, is bigger than, etc), fulltext (search for words and parts of words) and Fuzzy (sounds like, looks like) search features are available. In addition, wildcards can be used (?, *) as well as operators (+, -, AND, OR). In addition, a thesaurus can be used, with which one can search with synonyms, broader and narrower terms.

Standards and protocols

Atlantis supports many standards and protocols. This allows you to make available your heritage information for publication via own websites and portals, or those of others.

API

Wide availability

The information in Atlantis and / or assembled in Atlantis can be consulted via computers, laptops, tablets, phones etc. Standard components are available for access via the regular Internet Browsers, but also in the form of Apps for general use and for tablets and phones of Apple or operating under Android.

These components can be adjusted, extended and designed to one's liking. In addition, one can submit a proprietary App in the App Stores of Apple and Google. The audience can download these apps for free or for a fee and use them for access to your heritage information.

Multimedia

Atlantis is multifaceted in the field of storage, retrieval and presentation of multimedia files. All types of files, varying from images, audio/video, text documents, spreadsheets etc, can be stored, retrieved and presented.

For the storage and presentation of images, a viewer is used that works in the browser without any plug-ins. This means that the images can be viewed by 100% of your visitors. Over 150 file formats are recognized for the storage of images.

The stored images do not have to be converted to a specific file format for them to be efficiently presented online. Atlantis supports full streaming for audio/video. Depending on the type of browser and the platform, the best form of presentation for the audio and video streams is chosen automatically.

Over the past 15 years, many heritage and government institutions, libraries, museums and leading institutions from the international culture and heritage industry have expressed their trust in DEVENTit.
